

Certified Installer & Designer Training

Two-day course for experienced construction industry professionals looking for an in-depth understanding of weather protection and moisture management.

Certified Installer & Designer Training helps architects, façade engineers and builders deliver dry, durable and mould-free buildings. Protect your reputation and investment.

Learning Outcomes

- Understand moisture dynamics in the building envelope, regardless of product or system.
- Apply best-practice principles for energy efficiency and indoor air quality.
- Master WRB and IAB installation techniques.
- Gain practical experience using a full range of weathertightness and airtightness products.
